EDUCATION

Northeastern University

Sept 2025 – May 2027

Master of Science in Computer Engineering - Information Systems

GPA: 4.0/4.0

Coursework: Database Management Systems, Design Paradigm, Web Development, Cloud Computing

Abdul Kalam Technical University

July 2015 – June 2019

Bachelor of Technology in Computer Science

GPA: 8.3/10.0

Coursework: Data Structures, Operating Systems, Computer Networks, Algorithm Design

TECHNICAL SKILLS

Languages & Frameworks: Python, Java, SQL, TypeScript, JavaScript, React, Next.js, Node.js, Angular

DevOps & Systems: Linux, Bash, Shell Scripting, CI/CD (Jenkins), Docker, Kubernetes, Kafka, Terraform

Cloud & Distributed Systems: AWS(EC2, S3), RabbitMQ, GCP(Dataflow, Dataproc)

Databases: PostgreSQL, MongoDB(NoSQL), MySQL, Redis

AI / ML: TensorFlow, PyTorch, HuggingFace, NLP, Pandas, NumPy

EXPERIENCE

Software Developer

May 2024 – Aug 2025

Nokia Solutions

Gurgaon, India

- Designed an AI-powered internal assistant using **Python, REST APIs, and GPT-based NLP** to centralize search across **5,000+** internal documents, reducing information retrieval time by **70%** for **50+** engineers.
- Implemented automated **CI/CD** pipelines with monitoring and rollback strategies across **4** engineering teams to replace unstable manual releases, reducing deployment failures by **50%**.
- Architected an **Apache Kafka**-based event reprocessing system for network telemetry pipelines to automatically recover schema/validation failures in thousands of JSON packets, cutting error rates to **<1%** and eliminating manual backlog.
- Authored production design documents and drove cross-team technical alignment across **4** engineering teams to standardize system architecture, reducing incident rates by **30%** and shortening release cycles from **2 weeks to 1 week**.

Software Developer (Internal Audit Team)

Nov 2022 – May 2024

Grant Thornton

Noida, India

- Built a **full-stack** project management platform with **React, Python, and PostgreSQL** to replace fragmented tracking tools, centralizing workflows for **3,000+** projects and cutting operational response time by **35%**.
- Developed containerized **CI/CD** pipelines using **Docker, Jenkins, and Git** with automated testing and quality gates for **15+** microservices, hardening the release process and reducing post-release defects by **60%**.
- Optimized high-traffic **REST APIs** and frontend performance by improving database queries and caching strategies, reducing response times by **20%** and supporting **300+** concurrent users.

PROJECTS

OrbitFiles – Distributed Cloud Storage Platform

[GitHub](#)

- Engineered a distributed cloud storage platform using **Next.js, TypeScript, and PostgreSQL** to support authenticated access, lifecycle tracking, and **5GB+** file uploads, with document chat for semantic search.
- Reduced storage redundancy by **30%** and improved file search speed by **40%** by implementing SHA-256 deduplication, OpenAI-powered metadata tagging, and CDN caching.

AuditIQ – AI Audit Automation Platform

[GitHub](#)

- Built a production-ready audit automation platform with **React, Spring Boot, and Python microservices** to support AI chatbot workflows and compliance automation for audit teams.
- Leveraged **HuggingFace T5** models and containerized microservices with **Docker and Kubernetes** to deliver auto-scaling risk analysis workflows, reducing manual audit effort by **70%**.

TechCareer Analyzer – ML Intelligence System

[GitHub](#)

- Developed an end-to-end ML pipeline using **pandas/NumPy** and **BERT (PyTorch)** to analyze **10,000+** job postings and extract in-demand skills for job seekers, achieving **92%** extraction accuracy.
- Built a **TensorFlow**-based salary prediction service over **15+** roles using real job market data to estimate competitive salary ranges, achieving **85%** prediction accuracy.
